## **Bighorn Mountain**

Date Sat, 03/13/2021 - 11:25 Activity Skiing

Touring in noted sluffs starting at rock outcrops on south facing slopes. Our route followed the summer trail and I believe the usual up route to the summit of Bighorn Mountain. We experienced no signs of snow instability on the route we traveled. The snow depth along Black Butte Creek is thin and on the climb up to Bighorn the snow depth is approximately 120 cm. The skiing was good all the way down, even along Black Butte Creek.

Region Southern Gallatin Location (from list) Big Horn Peak Observer Name David Combs
