## Poor snow stability in Absaroka

Date Sat, 02/22/2025 - 01:10 Activity Skiing

From IG story. "<u>Cornice</u> triggered persistent on a protected north face up Suce Creek. 3-4 ft deep. Absarokas are not like the Bridgers, Gallatins, etc. A few weeks ago we found the entire snowpack to be faceted top to bottom in Mill Creek...."
